### **DETAILED ACTION**

1. The Office acknowledges the receipt of Applicant's restriction election filed November 6, 2003. Applicant elects Group I and Invention D (SEQ ID NO:8 encoding SEQ ID NO:9) without traverse. Claims 1-12 and 14-19 are pending. Claims 14-19 are withdrawn from consideration. Claims 1-12 are examined in the instant application. This restriction is made FINAL.

### ***Sequence Listing***

2. Applicant's CRF and paper sequence listing have been entered. However, upon examination of SEQ ID NO:8 and its corresponding amino acid sequence SEQ ID NO:9, it is unclear what region of SEQ ID NO:8 encodes SEQ ID NO:9. Clarification is required.

### ***Information Disclosure Statement***

3. An initialed and dated copy of Applicant's IDS form 1449, filed February 19, 2002 is attached to the instant Office action.

### ***Specification***

4. The Brief Description of Drawings in the specification does not match the drawings submitted. Figures 1A and 1B are not described in the specification. Correction is required.

### ***Claim Rejections - 35 USC § 112, first paragraph***

5. Claims 1-3 and 6-12 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the **written description** requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claims reciting 85-95% sequence identity lack adequate written

description because Applicant does not disclose a representative number of species as encompassed by these claims. The claims encompass mutants and allelic variants and thus imply that structural variants exist in nature, yet no structural variant has been disclosed. The claims also encompass pantothenate synthetases from other species. The implication is that there is a gene and a protein other than that disclosed which exists in nature, but the structure thereof is not known. Applicant discloses a single sequence SEQ ID NO:8 isolated from soybean. Thus, there is insufficient relevant identifying characteristics to allow one skilled in the art to predictably determine such mutants, allelic variants and pantothenate synthetases from other plants and organisms, absent further guidance. Accordingly, there is lack of adequate description to inform a skilled artisan that applicant was in possession of the claimed invention at the time of filing. See Written Description guidelines published in Federal Register/ Vol.66, No. 4/ Friday, January 5, 2001/ Notices; p. 1099-1111.

6. Claims 1-3 and 6-12 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for SEQ ID NO:8 and a nucleic acid sequence encoding SEQ ID NO:9, does not reasonably provide enablement for nucleic acid sequences having 85-95% sequence identity to SEQ ID NO:9 at the amino acid level. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. The breadth of the claims encompasses sequences having unspecified deletions, additions, substitutions and combinations thereof while maintaining pantothenate synthetase activity. Neither the state of the prior art nor Applicant provided guidance as to which regions of SEQ ID NO:8 or a sequence encoding SEQ ID NO:9 must be retained for activity, and which regions can tolerate mutations. Applicant

Art Unit: 1638

provided no working examples of sequences having 85-95% sequence identity. While one skilled in the art can readily make mutations to SEQ ID NO:8 or a sequence encoding SEQ ID NO:9, further guidance is required as to which mutations would be tolerated. Absent of such guidance, one skilled in the art cannot make and use the claimed invention as commensurate in scope with the claims without undue experimentation.

**Remarks**

7. Claims 4-5 are objected to as being dependent on a rejected claim but would be allowable if rewritten in independent form. SEQ ID NO:8 encoding SEQ ID NO:9 is free of the prior art. It is understood by the Office the recited Clustal alignment method uses the default parameters set forth on page 24 of the specification. The closest prior art teaches a sequence from *Lotus japonicus* having 78.6% sequence identity with SEQ ID NO:9 (WO 99/42565 (Applicant's IDS)).
